River water has a marked effect on tidal levels in the river Thames, especially in the upper reaches. The levels are given for a mean flow of 18 cumecs at Teddington Weir. Flows of 650 cumecs have been recorded and, for the latter figure, levels at London Bridge will be approximately 0.3m higher than predictions. The effect decreases down the river and is not noticeable at Southend. Similarly, abnormally low flows can be expected to reduce tidal levels. When the Thames Flood Barrier is closed, levels upstream of the Barrier will be markedly different from predictions.
